

Ultraclean and high barrier packaging that protects

Medical

Pharmaceutical

Electronics

Veterinary

Foodstuffs

Aerospace

Laboratory

From Silicon Valley to the Pacific Rim, in business sectors where the integrity of a company's product is vital, Zeal Clean Supplies is a world leader in the manufacture of Ultraclean Polythene, Ultraclean Clear High Barrier Packaging and a wide range of High Barrier Foil Packaging.

Our customers include many industry leaders in the medical, pharmaceutical, veterinary, foodstuffs, electronics, aeronautic/aerospace and laboratory sectors.

Ultraclean Polythene

Zeal Clean Supplies produces Ultraclean Polythene inside a Class 1000 cleanroom (clean to level 25MIL – STD – 1246C). The combination of a controlled cleanroom environment and the use of additive free raw materials means that any potential contamination caused by particulates, surface leaching, chemicals or outgassing has been virtually eliminated. The result is the cleanest polythene packaging made anywhere in the world. Furthermore, our Ultraclean Polythene film has been tested and approved time and again by the world's leading clean manufacturers.

Transclean Packaging

By combining our Ultraclean Polythene with the glass like clarity of polyester and the extraordinary barrier properties of beam deposited aluminium oxide, Zeal are able to produce the cleanest and clearest high barrier packaging available today. The combination of these laminates, provide not only super high barriers against moisture and gases, but also provides the cleanest possible environment in which to protect your product against any form of particulate contamination and any form of chemical leaching, caused by the outgassing of harmful chemicals associated with conventionally produced packaging.

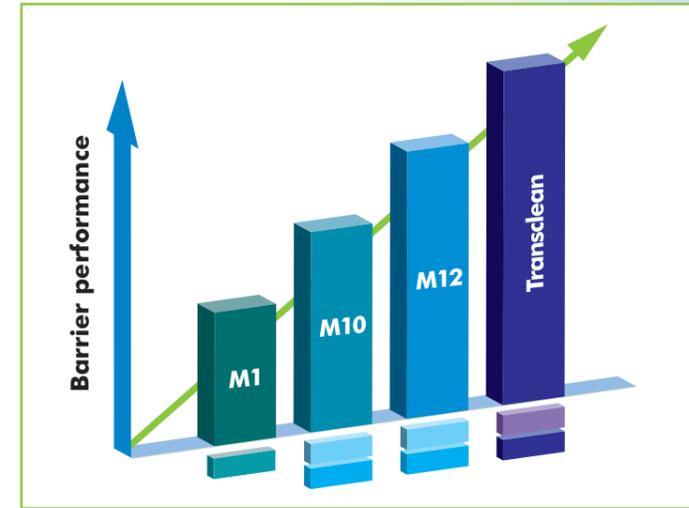

High Barrier Foil Packaging

Complementing our Ultraclean Polythenes are a portfolio of laminated high barrier foil films. These specialised films offer a high barrier to moisture, air and light, including U.V. They are also available with ESD properties. In addition, they can be supplied plain or printed up to 6 colours.

As an industry first, we can now offer these films laminated to our Ultraclean Polythene. As a result, we cannot only provide a high barrier but an Ultraclean high barrier to suit our customers increasingly demanding requirements for protection.

- Metallised Polyester
- Available with ESD properties
- PET/Alu/LDPE
- Chemically pure and particulate free
- PET/AlOx/Clean LDPE

With a new cleanroom under development and programmes of constant staff training and continuous improvement in place, Zeal Clean Supplies continue to ensure that they maintain their industry leading status.

Quality Control

Over and above full BE EN ISO 9001-2000 accreditation, which is seen by Zeal Clean Supplies, and most of our customers as a minimum standard to be achieved, Zeal Clean Supplies are proud of the fact that the systems and procedures developed for our operations meet the exceptional standards of some of the world's leading pharmaceutical and technology companies. Regular testing into the outgassing characteristics of our products, and the processes and environment of our cleanrooms, along with gas chromatography to monitor the basic structure of our product, underpins these standards.

Details of the Zeal Clean Supplies testing regimen is shown on our website at www.zealcleansupplies.co.uk and customers are always welcome to visit our premises to inspect our standards and procedures at any time.

For further information

Based in London in the UK, the company has a global network of representatives who can offer customers local service support in Asia, North America and Europe. Please contact the Head Office below to arrange a meeting to discuss your requirements.
